

## DSWD DROMIC Report #1 on the Kanlaon Volcano Eruption as of 11 July 2026, 6PM

### I. Situation Overview

- As of **11 July 2026**, Kanlaon Volcano remains under **Alert Level 2** but the alert status **may step up to Alert Level 3 should magmatic eruption be forewarned by sustained and intensifying crater glow or banaag at the summit crater**. Magmatic eruption would generate life-threatening volcanic hazards such as pyroclastic density currents or PDCs, lava flows, ballistic projectiles, ashfall, rockfall and others. It is strongly recommended that communities within the 4-km radius Permanent Danger Zone or PDZ strictly remain evacuated and those within the PDC Hazard Zones be vigilant and ready for evacuation in case the chances of magmatic eruption increase. Local government and DRR partners must ready their response measures, paying special attention to the vulnerable members of the community including the elderly, those with medical conditions, expecting mothers and infants. In addition, increased vigilance against potential syn-eruption lahars and sediment-laden streamflow in channels draining the edifice is strongly advised should intense rains occur during eruptive unrest. Civil aviation authorities must also advise pilots to avoid flying close to the volcano's summit as ash from any sudden eruption can be hazardous to aircraft.
- On 10 May 2026 at around 7:00 PM, KVO reported observing with the naked eye for the first time incandescence at the Kanlaon Volcano summit caused by superheated volcanic gas, followed by netizen reports of the same observations. Such a phenomenon when it becomes visible to the naked eye is called crater glow or banaag, a common precursor of magmatic eruption at Mayon Volcano.
- On 09 July 2026 at 7:33 AM, Kanlaon Volcano generated a **moderately explosive eruption** from its summit crater that lasted three (3) minutes based on seismo-acoustic recordings in 14 stations of the Kanlaon Volcano Network. The event generated a dense grayish eruption column that was poorly visible in all cameras of the KVN due to thick cloud cover but was estimated from photographs taken farther away from the volcano to have risen approximately two (2) to three (3) kilometers above the summit crater. Poorly visible pyroclastic density currents or PDCs, hazardous mixtures of hot volcanic gas, ash and fragmented rock, descended the southeastern upper slopes within at least a kilometer of the summit crater. Incidents reported in social media indicate that angular rock fragments as large as 30 centimeters in diameter were thrown out as ballistic projectiles within a distance of five (5) kilometers from the crater and impacted Canlaon City, Negros Oriental on the southeastern flank. This is the farthest reach of ballistic fragments that has been recorded since Kanlaon erupted on 3 June 2024. The onset of explosive eruption generated a shock wave that was recorded at a maximum of 255 Pascals by an infrasound station approximately five kilometers east of the crater and was heard as a booming or rumbling sound within a 35-kilometer radius. Comparisons of the seismic and infrasound signals of the 8 July 2026 eruption with the February and 15 March

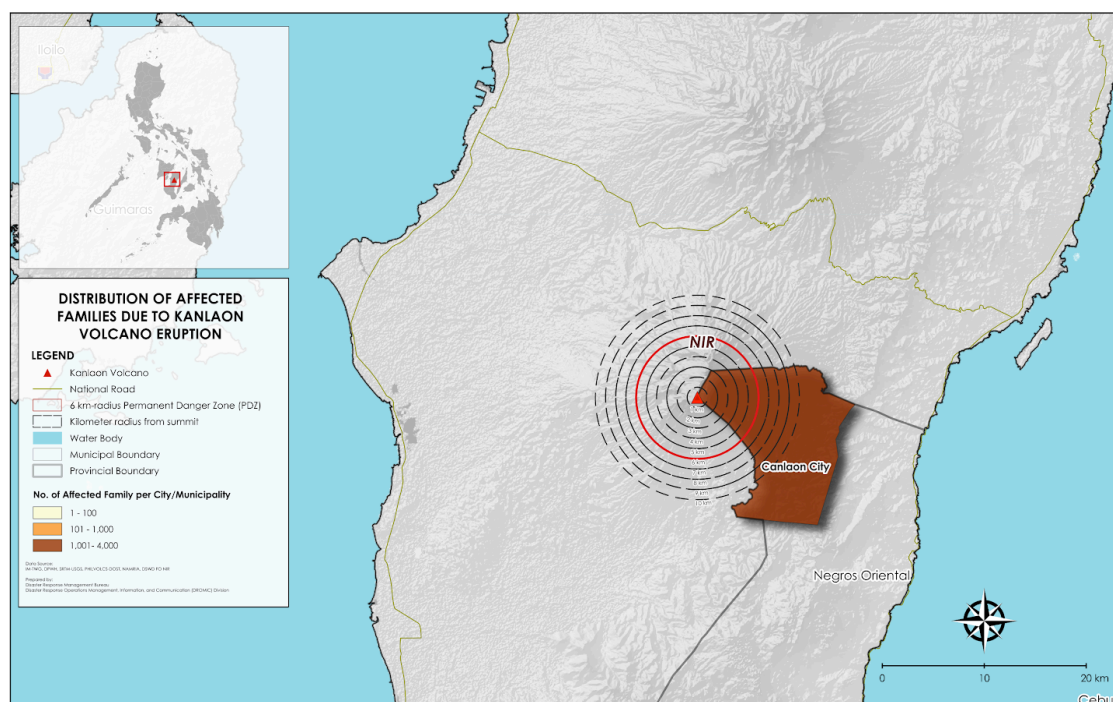

2026 eruptions yield broadly similar characteristics, indicating a repeating eruption mechanism. No significant uptrends in monitoring parameters succeeded the eruption. Sulfur dioxide emission or SO<sub>2</sub> flux was measured after the event at a low average of 473 tonnes/day, indicating that the volcanic system was temporarily devolatilized or sucked out of magmatic gas by the explosion.

- In response, the Department of Social Welfare and Development (DSWD), through its Field Office (FO) Negros Island Region (NIR), in coordination with the Local Government Unit (LGU) of the City of Canlaon, provided relief assistance to address the immediate needs of the affected families and individuals.

*Source: DSWD FO NIR*

## II. Status of Affected Areas and Population

A total of **3,635 families** or **11,933 persons** are affected in **two (2) barangays** in **Region NIR** (see Annex A).

## III. Status of Displaced Population

### Inside Evacuation Center

There are **eight (8) families** or **23 persons** currently taking temporary shelter in **two (2) evacuation centers** in **Region NIR** (see Annex B).

*Further, the breakdown of data of IDPs Inside Evacuation Centers are provided in the following annexes: Sex & Age Distribution (see Annex C), and Sectoral Distribution (see Annex D).*

## IV. Cost of Humanitarian Assistance Provided

A total of **₱6,195.00** worth of assistance was provided by **DSWD** to the affected families(see Annex E).

## V. Response Actions and Interventions

### a. Standby Funds and Prepositioned Relief Stockpile

#### 1. Standby Funds

- ₱593.72 million Quick Response Fund (QRF) at the DSWD Central Office.
- ₱3 million available at DSWD FO NIR.

#### 2. Prepositioned FFPs and Other Relief Items

- 1,345,000 FFPs available in Disaster Resource Centers; of which, 590,414 FFPs are at the Luzon Disaster Resource Center (LDRC), Pasay City; 544,800 FFPs are at the Visayas Disaster Resource Center (VDRC), Mandaue City; and 209,786 FFPs are at the Mindanao Disaster Resource Center (MDRC), Butuan City.
- 141,778 FFPs available at DSWD FO NIR.
- ₱441.12 million worth of other FNIs at LDRC, VDRC, MDRC, and DSWD FO NIR warehouses.

### b. Food and Non-food Items (FNIs)

| DATE         | ACTIVITIES                                                                                                                                                                     |
